Connection configuration
Set these environment variables before starting Streamlit:
$env:DB2_HOST = "127.0.0.1"
$env:DB2_PORT = "50000"
$env:DB2_DATABASE = "your-database"
$env:DB2_USER = "your-username"
$env:DB2_PASSWORD = "your-password"
$env:DB2_SSL = "false" # set true only if your Db2 service requires TLS
Do not paste database passwords into chat or commit them to Git. Db2 LUW catalog SQL is used by this initial connector.
Check Db2 connection
Initialize audition table
Db2 connection failed: Exception: [IBM][CLI Driver] SQL30081N A communication error has been detected. Communication protocol being used: "TCP/IP". Communication API being used: "SOCKETS". Location where the error was detected: "127.0.0.1". Communication function detecting the error: "connect". Protocol specific error code(s): "111", "", "". SQLSTATE=08001 SQLCODE=-30081
Local audition records available to sync: 0
Sync local audition library to Db2
Manage app
Facing this issue?
This is not an issue.
This simply means you must connect to a local Db2 instance to save your private information of selected actors (e.g., audition samples, analysis results, etc.) into a database.
1 Use the above credentials (DB2_HOST, DB2_PORT, DB2_DATABASE, DB2_USER, DB2_PASSWORD, DB2_SSL) to connect to your local Db2 server.
2 Create your database/table and save your data by executing SQL queries (e.g., CREATE TABLE, INSERT INTO, etc.).
3 Keep these secrets (credentials) in your local rasa-ai project file (e.g., in a .env file) on your device (do not commit to Git).
4 Finally, launch the app with:
> streamlit run app.py
